

This CURRIER & IVES CANNISTER SET was made by CARLTON GLASS

Note the packing of the glass cannisters, and note the type of lids that are on them. Interestingly, different types of lids can be seen on these cannisters on internet sale sites and at various malls and flea markets, but unless members buy them in the original box with the picture on the front, the type of lid that is seen with them is questionable. If they are vintage, there are usually wire bales with glass lids on the cannisters. Buying them in the original box with a picture on the front removes all doubt most times, but always double check.
